

TREXCARE

Safety & Support for Travelers and Expats around the World

GLOBAL SAFETY & SECURITY

TREXCARE is the easiest and most efficient way for companies to provide Business Travelers and Expats including dependents with the safety, security and general support they need when working in foreign countries around the world. Whether you have a handful of employees in a few countries or several thousand Expats and travelers located around the world - with our modular and scalable system you can manage and support them with ease and minimum resources around the world and around the clock. Give your employees the peace of mind that they are covered by TREXCARE and eliminate distractions and stress from their international assignments.

SOLUTIONS THAT FIT YOUR NEEDS

There is a lot of standard software for geo-tracking and geo-fencing in the market and some products also offer simple emergency support. In our view such standard software can never be a perfect solution. At TREXCARE we understand that every company and every industry, every region and every employee is different. Instead of a standard product, we will together with your team analyze your needs and specifics and then adapt our platform to meet all your requirements. The result is a perfect solution that integrates seamlessly with your company and covers all your needs in the most efficient way.

DESIGNED FOR OPTIMUM SUPPORT

We build on years and years of experience as Expats and Business Travelers around the world and know what people really care about when working and living in foreign countries. Based on this knowledge TREXCARE is more than just a simple geo-tracking and geo-fencing application. Every implementation is tailored to perfectly support your employees everywhere and in every situation by providing relevant location specific information and services - directly in your employee's hand.

Imagine your employee arriving at a foreign airport and receiving a personal welcome message that includes contact information of approved local transportation, recommended local hotels, nearest medical support, local company offices, etc. The employee also automatically gets current health and security information relevant for the location. Everything is possible - you decide what helps your employees and we will implement the perfect solution for you.

AUTOMATIC EVENT & CRISIS COMMUNICATION

International companies have to deal with many critical geo-political, health or environmental events that can affect employees. TREXCARE offers a complete interactive module for centralized and location specific information management and delivery around the world in real time. When a new internal message, a health alert or a travel and security alert is entered, the specified region is used to automatically send it to the smartphones of all affected users. Even those users who arrive after the information was entered will still be informed immediately upon entering the region. Of course delivery and acknowledgement of all messages can be tracked within TREXCARE. Whether you want to manage these updates yourself or you want us to take care of this - everything is possible!

EMERGENCY SUPPORT & CASE MANAGEMENT

TREXCARE offers location specific information such as the nearest medical support and local support numbers. Using geo-tracking and geo-fencing TREXCARE keeps your employees out of critical areas. Your employees automatically get updated about critical events and health alerts in their region. For any emergency situation TREXCARE also offers a complete emergency support module. Panic button, one click contact to local support, interactive chat, real time location tracking are just a few of the options we can implement. Whether you are a multinational enterprise and want to manage all this in-house or you want an external call center that assists your employees and manages the emergency cases for you... we will help you find the best solution for your organization and budget!
